1. FUNCTION: PLASA A STRUCTURAL ROLE IN THE NACRE MATRIX FRAMEWORK OF THE SHELL. MAY ALSO PERFORM OTHER FUNCTIONS SUCH AS INTERACTING THE PROTEIN COMPONENTS OF THE MATRIX FROM DEGRADATION, AND CONFERRING ELASTIC RESILIENCE TO THE MATRIX SYNTHESIZED AND SECRETED SECRETED SECRETED SECRETED SECRETED COMAIN: THE PROTEIN CONTAINS THE MATLIAL CELLS.

1. DOMAIN: THE PROTEIN CONTAINS TEN HIGHLY CONSERVED CYSTEINE-RICH DOMAINS INTERSPERSED BY EIGHT PROLINE-RICH DOMAINS. A GLYCINE- AND SERINE-RICH DOMAINS INTERSPERSED BY EIGHT PROLINE-RICH DOMAINS. AND THESE ARE FOLLOWED BY A BASIC DOMAIN AND A C-TERMINAL DOMAIN THAT IS HIGHLY SIMILAR TO KNOWN PROTEASE

2. INHIBITORS.

F;85-130/Domain: antileukoproteinase repeat homology <ALP2>
F;35-64,43-68,51-63,57-72,89-118,96-122,105-117,111-126/Disulfide bonds: #status predicte
F;45/Inhibitory site: Arg (trypsin) #status predicted
F;86/Binding site: carbohydrate (Asn) (covalent) #status absent
F;89/Binding site: Leu, Met (elastase, chymotrypsin) #status predicted
C;Comment: This protein contains a four-disulfide core, a three-dimensional folding parture is also found in the related whey acidic proteins and chelonianin.

C;Comment: The sources of this protein include saliva, seminal plasma, and glandular tiss C;Comment: Human mucous fluids contain acid-stable proteinase inhibitors with strong affienchorceinases suggest that these inhibitors are encoded by a single gene expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ŝ

C; Comment: Whey acidic protein and the neurophysius resemble each other in the number an otherwise there is little detectable similarity between these proteins.
C; Comment: This is one of the major protein components in the milk whey; although its fu cyclencities in hibitory function.
